

PRESS RELEASE

International Security and Safety Expo to Begin in Dhaka on September 17

Gathering of Local Technology and International Security Companies to Begin September 17

Three-Day Security Technology Expo to Begin at ICCB on September 17

International Expo Featuring the Latest Innovations in Security Technology to Begin in Dhaka

Dhaka, September 8, 2026: With the aim of further strengthening the country's security, workplace safety, and emergency response capabilities, the **2nd International Security Expo 2026** and **Occupational Safety, Health & Fire Expo 2026** will be held from **September 17 to 19, 2026**, at the **International Convention City Bashundhara (ICCB)** in Dhaka.

The three-day **International Security Expo 2026** and **Occupational Safety, Health & Fire Expo 2026**, being organized for the second time, are jointly being organized by **i-Station Limited**, a technology products and services provider in Bangladesh, and the **Bangladesh Computer Samity (BCS)**, the trade association of information technology businesses. The exhibitions will continue until **Saturday, September 19**.

The two international exhibitions, being held simultaneously and organized by the Bangladesh Computer Samity (BCS) and i-Station Limited, will showcase the latest technologies and solutions in security technology, fire safety, workplace safety, emergency response, risk management, and compliance with international standards and regulations.

The organizers said that approximately **150 leading brands from 10 countries** are expected to participate in the three-day event. They also expect around **5,000 trade visitors** to attend the exhibitions.

According to the organizers, the exhibitions will become an important international gathering for Bangladesh's rapidly evolving security and workplace safety sectors. The event will create new opportunities for business communication and technology exchange between local and international companies.

Mr. Mohammad Zahirul Islam, President of BCS, said, "Ensuring a strong and modern security system is extremely important for a safe and technology-driven future. At present, security risks are also increasing alongside the rapid development of technology. Therefore, in addition to establishing effective security systems at the individual, organizational, and national levels, the use of modern technology must also be increased."

He further said, "Various local and international companies will showcase their latest technologies and innovative products at this exhibition. As a result, visitors will have the opportunity to learn directly about new technologies and gain an understanding of their applications and potential."

Speaking about the event, **Madhu Sudan Saha, Managing Director of i-Station Limited**, said, “The International Security Expo 2026 will showcase the latest technologies and products for security and safety management. These will include surveillance and monitoring systems, cybersecurity, access control, biometric technology, security software, networking switches, digital vaults, and various modern security equipment and solutions for both the government and private sectors.”

He said, “The use of smart and connected technologies in the management of various organizations and infrastructure is currently growing rapidly. In this context, the exhibition will provide organizations and businesses with an opportunity to learn about modern security technologies as well as to make their own security systems more effective and stronger. On the other hand, the Occupational Safety, Health & Fire Expo 2026, being held simultaneously, will showcase various modern solutions for industrial and workplace safety.”

The exhibition will feature **Personal Protective Equipment (PPE), industrial safety, fire detection and protection systems, emergency response, risk management, workplace health and safety, and technologies and products related to international safety and compliance standards.**

As rapid industrialization, urbanization, and infrastructure development continue in the country, the importance of modern technology and effective management in ensuring workplace safety and addressing fire risks is also increasing day by day. This exhibition will serve as an important platform for the industrial sector to explore new technologies and solutions to meet these needs.

New Connections between Industry and Technology

The two exhibitions, featuring the participation of leading local and international brands, will create opportunities for direct communication and business relationships among manufacturers, technology suppliers, distributors, representatives of industrial organizations, safety professionals, businesspeople, decision-makers, and relevant policymakers.

The organizers said that the event will not be limited to product displays. Two seminars will also be held on security, workplace safety, the use of technology, and the future of the industrial sector. Through these seminars, opportunities will be created for knowledge and experience sharing, business networking, and effective collaboration among technology and security experts and professionals associated with the safety sector.

Visitors to the exhibitions will have the opportunity to see the latest technologies and innovations firsthand, while also learning about changing trends in the security and safety sectors. At the same time, they will gain practical insights into how organizations can use modern technology to ensure safer, more secure, and risk-free workplaces and living environments.
